The library was constructed by Claire Murphy and Dr. James McCarte
at Washington University, St. Louis. Oligo(dT)-SL1 PCR based
library. Embryo cDNA PCR products of size >400 nucleotides
containing SL1 on the 5' end and oligo(dT) on the 3' end were
non-directionally cloned into pCRII-DOPO(Invitrogen) following the
Topo TA cloning protocol. 30-60 cell embryo material was provided
by Dr. Richard Davis of City University of New York Graduate
Center, College of Staten Island, Staten Island, NY
(redavis@postbox.csi.cuny.edu).
                                                                                                                                                                                                                                                                                                                                                                                           Seq primer: SL1 primer.

  /clone lib="Ascaris suum embryo SL1 TOPO v1"
/note="Vector: pCRII-TOPO (Invitrogen); Site 1: EcoRI;
Site 2: EcoRI; The library was constructed by Claire
Murphy and Dr. James McCarter at Washington University,
St. Louis. Oligo(dT)-SL1 PCR based library. Embryo cDNA
PCR products of size >400 nucleotides containing SL1 on
the 5' end and oligo(dT) on the 3' end were
non-directionally cloned into pCRII-TOPO(Invitrogen)
following the Topo TA cloning protocol. 30-60 cell embryo
material was provided by Dr. Richard Davis of City
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /db_xref="taxon:5518"

GENERAL INFORMATION:
APPLICANT: Monsanto Co

Sequence 9, Application US/09872051 Patent No. US20020013960A1

```
APPLICANT: Behr, Carl
APPLICANT: Hiromaka, Catherine
APPLICANT: Heck, Gregory
APPLICANT: You, Jinsong
TITLE OF INVENTION: Corn Event PV-ZMGT32(nk603) and Composition and Methods for Det
TITLE OF INVENTION: Thereof
FILE REFERENCE: 38-21(52258)B
CURRENT APPLICATION NUMBER: US/09/872,051
CURRENT FILING DATE: 2001-06-01
PRIOR APPLICATION NUMBER: 60/213,567
PRIOR APPLICATION NUMBER: 60/213,567
PRIOR FILING DATE: 2000-10-13
PRIOR APPLICATION NUMBER: 60/241,215
PRIOR APPLICATION NUMBER: 60/241,215
PRIOR FILING DATE: 2000-10-13
PRIOR FILING DATE: 2000-10-13
NUMBER OF SEQ ID NOS: 16
SOFTWARE: Patentin version 3.0
SEQ ID NO 9
LENGTH: 19
TORANISM: Artificial Sequence
FEATURE:
NAME/KEY: source
IOCANION: (1) . . (19)
OTHER INFORMATION: Zea maize genomic and vector DNA

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

# SUMMARIES

The invention relates to a DNA construct (I) a second (F2) expression cassette. F1 of the

comprising a first (F1) and DNA construct, in operable

Claim 8; Page 3; 25pp; English.

Novel DNA construct useful for producing a corn plant that tolerates application of glyphosate herbicide, comprises two transgene expression

WPI; 2002-165871/22.

Also included are two DNA sequences from corn plant PV-ZMGT32(nk603) of 498 or 1183bp, or primers and probes derived from them (used to detect transgene junction points). The construct is useful for producing a corn plant that tolerates application of glyphosate herbicide by transforming a corn cell with, selecting the corn cell for tolerance to application of glyphosate, and growing the corn cell into a fertile corn plant. The present sequence is a transgene junction probe sequence consisting of corn plastid DNA and vector sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                     5-enol-pyruvylshikimate-3-phosphate synttenscriptional terminator; cauliflower pv-ZMGT32; transgenic; nk603.

Also included are two DNA sequences from corn plant Pv-ZMGT32(nk603) of 498 or 1183bp, or primers and probes derived from them (used to detect transgene junction points). The construct is useful for producing a corn plant that tolerates application of glyphosate herbicide by transforming a corn cell with, selecting the corn cell into a fertile corn plant. The present sequence is the 1183bp amplicon consisting of the Agrobacteium transcriptional terminator sequence,

```
New recombinant DNA construct comprising a promoter positioned to provide for expression of a polynucleotide encoding a polypeptide from a microbial source, useful for producing plants with improved properties.
```

Claim 1; SEQ ID NO 33178; 122pp; English.

CC microbial source: The invention also relates to a transformed plant CC comprising the recombinant DNA construct and a method of producing a CC transformed plant having an improved property. The plant is a crop plant CC such as maize or soybean. The method of producing a transformed plant CC having an improved property comprises transforming a plant with the CC recombinant DNA construct and growing the transformed plant, where the CC polynucleotide or polypeptide is useful for improving plant with the CC improved plant properties, e.g. improved cold, heat or drought tolerance, CC interance to herbicides, extreme osmotic conditions, pathogens or pests, CC increased resistance to plant disease, better growth rate by modification of the cell cycle pathway with plant growth regulators, increased rate of CC content, improved yield by modification of carbohydrate, nitrogen or CC condition, improved plant growth and development under at least one stress CC condition, improved lignin production or improved galactomannan CC production. This sequence represents a bacterial polymucleotide used in CC condition, improved lignin production or improved galactomannan CC production. This sequence represents a bacterial polymucleotide used in CC format from USPTO at seqdata.uspto.gov/sequence.html. promoter functional in a plant cell, where the promoter is positioned provide for expression of a polynucleotide encoding a polypeptide from The invention relates to a recombinant DNA construct comprising a to

Monitoring differential expression of genes in filamentous fungal cells uses fluorescence-labeled nucleic acids isolated from the cells and a substrate of expressed sequence tags.

Claim 86; Page 768; 3161pp; English

The present invention describes a method for monitoring differential CC expression of genes in a first filamentous fungal (FF) cell relative to cells. The method uses fluorescence-labeled nucleic acids isolated from CC cells. The method uses fluorescence-labeled nucleic acids isolated from CC the FF cells and a substrate of expressed sequence tags (EST). The ESTs care used in the methods for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of genes CC same genes in one or more second filamentous fungal cells. Monitoring the global expression of genes from FF cells allows the production potential cof the microorganisms to be improved. New genes may be discovered, conditions, environmental stress, spore morphogenesis, recombination, cometabolic or catabolic pathway engineering. Using ESTs provides several advantages over genomic or random cDNA clones including elimination of catabolic pathway engineering. Using ESTs provides several advantages over genomic or random cDNA clones including elimination of canditions, as one spot on an array equals one gene or open reading frame, can be compared to facilitate analysis of the results. AAF07478 to AAF11247 con Aspergillus oryzae; and AAF14879 to AAF12487 represents ESTs from Aspergillus oryzae; and AAF14879 to AAF1337 represents ESTs from control of the present of

                                                                                                                                                                                                                                                                               The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium. Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nakagawa

Coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     organic acid synthesis; ds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analyzing expression profile or pattern of a gene and identifying homologous gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            EP1108790-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Corynebacterium glutamicum

CC type or tissue in which a given gene is expressed and to allow a compared to the abundance or expression level of a given gene in a cc determination of the abundance or expression level of a given gene in a cc garticular tissue or cell. The methods are useful for determining the cc similarity of a toxic response to one or more individual compounds. The cc likelihood that a compound or test agent will induce various specific cl pathologies such as those of the liver (liver necrosis, fatty liver conserved to the protein adduct formation or hepatitis), those of the kidney, cc disease, protein adduct formation or hepatitis), those of the kidney, cc heart, brain or testes, or other pathologies associated with at least one cf the toxins. The methods are also useful for predicting or elucidating cf the potential cellular pathways influenced, induced or modulated by the cc compound or test agent due to the similarity of the expression profile compared to the profile induced by a known toxin. The present sequence is that of a canine DNA sequence which was claimed for use during the cc production of a canine microarray of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention is related to a novel isolated canine nucleic acid sequences and the construction of canine microarrays containing a significant portion of the canine genome. The isolated canine nucleic acid sequences of the invention may be useful for drug screening and toxicity assays. The invention may be useful for assessing the impact, including toxicity, of a compound, pharmaceutical agent or environmental pollutant on a cell or living organism. The methods are useful for detecting genes that are up- or down-regulated in canines in a disease state. The sequences are useful as diagnostic agents or markers to detect a cellular response in a sample individually or as part of a gene expression profile. It is also useful as a target for agents that modulate gene expression or activity. The database is useful for producing electronic Northerns that allow the user to determine the cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated nucleic acid molecule, useful for drug screening and toxicity assays or for assessing the impact, including toxicity, of compound, pharmaceutical agent or environmental pollutant on a cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 1; SEQ ID NO 6234; 41pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (1) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cell carcinogenic potential of a compound; (g) determining whether prostate cell carcinogenic potential of a compound; (d) assessing the aggressiveness or indolence of prostate cancer in a patient; (ii) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel isolated nucleic acid molecule associated with cancerous state prostate cells and correlating with presence of prostate cancer, use for detecting presence of prostate cancer, stage of prostate cancer.
                                                                                                                                                                                                                                                                                                                                   Human; prostate pharmacogenomic

(I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cancer has metastazized in a patient; (f) assessing the aggressiveness or indolence of prostate cancer in a patient; (ii) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ABN75645;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 435

                                                                                                                                                                                                                                                                                                                                                                                              S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC neurological disorders such as epilepsy and Alzheimer's disease.

CC cardiovascular diseases, immune system disorders, disorders related to corgan transplantation, disorders of tissue growth and regeneration, and cholesterol ester storage disease, and infectious diseases caused by viral, bacterial, corgan and other pathogens. ORFX nucleic acids may also be used as a corgan and other pathogens, in the detection of ORFX genomic sequences cor transcripts, in the identification and cloning of homologous corrections, in genetic diagnosis, and in forensic biology. The ORFX corcleic acids may additionally be used to produce transgenic animals conclude and in drug screening. The ORFX proteins may also be used as cimmunogens to generate specific antibodies, which are useful in the corgan activity of ORFX diagnosis, treatment and monitoring of ORFX-associated diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC ABNY9587 represent CONAs encoding them. The invention also encompasses CC ABNY9587 represent collass and them. The invention also encompasses of collectively considered to as ORFX) proteins, polynucleotides at least 85% identical to the ORFX nucleic acid sequences, vectors and host cells comprising ORFX CC the ORFX nucleic acid sequences, vectors and host cells comprising ORFX CC polynucleotides, the recombinant production of ORFX proteins, antibodies specific for ORFX proteins, methods of detecting ORFX proteins, antibodies of ccivity, and methods of screening for modulators of ORFX expression or ccivity, and methods of screening individuals for a predisposition to an CC ORFX-associated disorder. The ORFX proteins of the invention have a wide crange of biological activities, such as cytokine, cell proliferation, cc cell differentiation, immune modulation, haematopoiesis regulation, cc tissue growth, angiogenesis, activity, thrombolytic activity, chemotactic/CC chemokinetic activity, haemostatic activity, thrombolytic activity, creceptor/ligand, antiinflammatory activity, thrombolytic activity, cand antiinfective activity, and behaviour. ORFX proteins, conclude acids and antibodies may be used in the treatment of cancers, cother proliferative disorders such as sporiasis and benign tumours, and altheing activity and behaviour. ORFX proteins, and activity disorders such as pooriasis and benign tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate call carcinogenic potential of a compound; (g) determining whether prostate call carcinogenic potential of a patient; (f) assessing the aggressiveness or indolence of prostate cancer in a patient; (i) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               09-JUN-2000;

methylation of a particular cytosine in a motif 5'-CpG-3', present in a CG genomic sample of DNA. The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, CG of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the CG degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of coligomers, the degree of methylation is calculated. The method is used: (i) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide polymorphisms CG (SNP's); and (ii) for differentiation of cell or tissue types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously. ABQ13410-ABQ54121 represent genomic DNA sequences used to illustrate the method of content of the degree of cytosine methylation described in the

XX

This invention describes a novel method for determining the degree of CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a CC genomic sample of DNA. The sample is treated chemically to convert CC cytosine (C) but not methylated C, to uracil, then part of the genomic CC DNA that contains the target C is amplified to form a labeled amplicon. CC of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes, each with at least one member, CC degree of hybridisation to both classes is determined from the label on CC oligomers, the degree of methylation is calculated. The method is used: (i) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., CC particularly by detecting mutations or single nucleotide polymorphisms CC (SNP's); and (ii) for differentiation. The method allows the methylation cc investigating cell differentiation. The method allows the methylation cc status of many C residues to be determined simultaneously. ABO13410-CC ABD54121 represent genomic DNA sequences used to illustrate the method CC disclosure of the invention

GENERAL INFORMATION:

APPLICANT: Monsanto Co APPLICANT: Behr, Carl Sequence 11, Application US/09872051 Patent No. US20020013960A1

```
APPLICANT: Hironaka, Catherine
APPLICANT: Heck, Gregory

APPLICANT: You, Jinsong

TITLE OF INVENTION: Corn Event pv-ZMGT32(nk603) and Composition and Methods for Detailt Detailt.

TITLE OF INVENTION: Thereof

FILE REFERENCE: 38-21 (52258) B

CURRENT EPILING DATE: 2001-06-01

PRIOR APPLICATION NUMBER: 60/213,567

PRIOR APPLICATION NUMBER: 60/213,567

PRIOR FILING DATE: 2000-06-22

PRIOR APPLICATION NUMBER: 60/241,215

PRIOR APPLICATION NUMBER: 60/241,215

PRIOR FILING DATE: 2000-10-13

NUMBER OF SEQ ID NUMBER: 60/240,014

PRIOR FILING DATE: 2000-10-13

NUMBER OF SEQ ID NOS: 16

SOFTWARE: Patentin version 3.0

SEQ ID NO 11

LENGTH: 18

TYPE: DNA

ORGANISM: Artificial Sequence
FEATURE:
NAME/KEY: SOURCE

OTHER INFORMATION: Zea maize genomic DNA and vector DNA

US-09-872-051-11

TITLE
Submitted (13-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On May 13, 2003 this sequence version replaced gi:23268058.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence contigs within a contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Plopper, F., Poindexter, A., Popovic, D., Primus, E., Pu, L. Submitted (19-SEP-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA On Sep 19, 2002 this sequence version replaced gi:21741421. The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequening reads assembled using Atlas (http://www.hgsc.bem.tmc.edu/projects/rat/). As a result, the sequence may extend beyond the ends of the clone and there may be contigs that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Submitted (13-FEB-2002) Human Genome Sequencing Center, Depart of Molecular and Human Genetics, Baylor College of Medicine, Baylor Plaza, Houston, TX 77030, USA

* NOTE: Estimated insert size may differ from sequence length

(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently

* consists of 7 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved. 152447 152547 152446: contig of 152446 bp in length 152546: gap of unknown length 214193: contig of 61647 bp in length

NEIGHBORING SEQUENCE INFORMATION: Actual start of this clone is at base position 1 of RP5-907C10 actual end is at 154959 of RP5-907C10.	about the map position of this sequence, see http://www.nhgri.nih.gov/DIR/GTB/CHR7, send mailto:egreen@nhgri.nih.gov, or see http://genome.wustl.edu mailto:egreen@nhgri.nih.gov, or see http://genome.wustl.edu source INFORMATION: This clone was derived from human PAC library RPCI-5, prepared by Pieter de Jong and coworkers at http://www.chori.org using the method described by Ioannou et al., Nature Genetics 6:84-9 (1994). The library is from one male donor. The clone may be obtained edonor. The clone may be obtained edonor. The tlone may be obtained enter from Genome Systems, Inc. (http://www.resgen.com); or from Pieter de Jong. VECTOR: pCYPAC2	This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.  MAPPING INFORMATION: The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project (Eric D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University Genome Sequencing Center: For additional information	Web site: http://genome.wustl.edu Contact: sapiens@wastson.wustl.edu Center project name: H_DJ0907C10 Center project name: H_DJ0907C10  NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.	to 154959)  ission 30-JAN-2004) Department of Genetics, Washingto 30-JAN-2004) Department of Genetics, Washingto 4444 Forest Park Avenue, St. Louis, Missouri 1999 this sequence version replaced gi:3213077 Genome Center Washington University Genome Sequencing Center code: WUGSC	6 (bases 1 to 154959) Waterston,R.                                                                                                                                                                                                                                                                                 The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 10, constructed by the Sanger Centre Chromosome 10 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr10
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             requests: clonerequest@sanger.ac.uk
On Jul 23, 2000 this sequence version replaced gi:9367364.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submist sequences with
only a small overlap as described above.
This sequence has been finished according to sequence map criteria
as follows. An attempt is made to resolve all sequencing problems,
such as compressions and repeats, but not necessarily within known
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              17;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AL133551

175940 bp DNA linear PRI 21-AUG-Human DNA sequence from clone RPI1-57G10 on chromosome 10 Conte a J-domain containing protein (JDP1) isoform B, the SIRT1 gene (Sir2-like proteins (siruitins) type 1), part of a novel gene (Sir2-like proteins) type 1), part of a novel gene similar to KIAA0033, two ribosomal pseudogenes, 2 CpG islands, RSTES care and GCSC.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          N
